

Dev Environment Set Up Micro-Service

1. Copy the below zip files from [\\korvm039\Revtool Files\softwares\2021 ReviewTool Dev SetUp](#) and unzip them in a separate folder (say software).
 - a. eclipse-jee-oxygen-3a-win32-x86_64.zip
 - b. java-11-openjdk-11.0.10.9-1.windows.redhat.x86_64.zip
 - c. apache-maven-3.8.2-bin.zip
2. Copy RTC-Client-p2Repo-6.0.5.zip from [\\korvm039\Revtool Files\softwares](#)
3. Search environment variables in the windows search and open **Edit the system environment variables** -> **Environment Variables** -> **Under System Variables Select Path** -> **click Edit** -> **select New**-> **add the Maven bin file path from the extracted folder** (example: C:\Users\tgh1cob\Desktop\Softwares\apache-maven-3.8.2\bin) -> **click ok and apply**.
4. Open CMD and **mvn -v** if maven install properly you will see something like this.

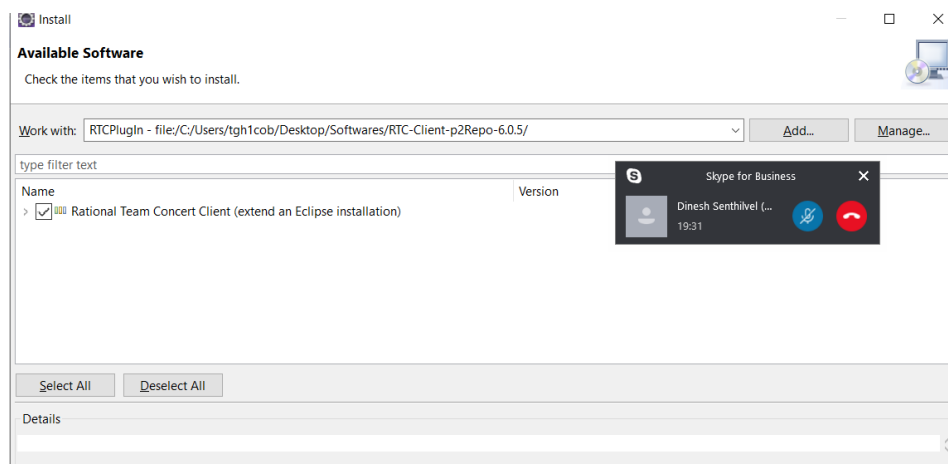

```
Microsoft Windows [Version 10.0.19042.1526]
(c) Microsoft Corporation. All rights reserved.

C:\WINDOWS\system32>mvn -v
Apache Maven 3.8.2 (ea98e05a04480131370aa0c110b8c54cf726c06f)
Maven home: C:\Users\tgh1cob\Desktop\Softwares\apache-maven-3.8.2
Java version: 1.8.0_302, vendor: Red Hat, Inc., runtime: C:\Program Files\RedHat\java-1.8.0-openjdk\jre
Default locale: en_US, platform encoding: Cp1252
OS name: "windows 10", version: "10.0", arch: "amd64", family: "windows"

C:\Windows\System32>
```

5. Go to C:\Users\<your ntid>\.m2 folder. Delete repository folder (in .m2) and add settings.xml from [\\korvm039\Revtool Files\softwares\2021 ReviewTool Dev SetUp](#) in the .m2 folder. **Note:** In settings.xml file replace xxxx with your username (NTID) and password
6. Open **eclipse.exe** from the extracted folder.
7. Then select **Help -> Install New Software -> local -> select the RTC-Client-p2Repo-6.0.5 folder -> click okay**. Give name as RTC-Client-p2Repo-6.0.5. Click the check box and click finish. Restart the workspace.

8. Select **Windows -> Show View -> Others -> Team Artifacts**

All Project and Team Areas (No Project Areas connected)

You are not connected to a project area.

[Accept Team Invitation](#)

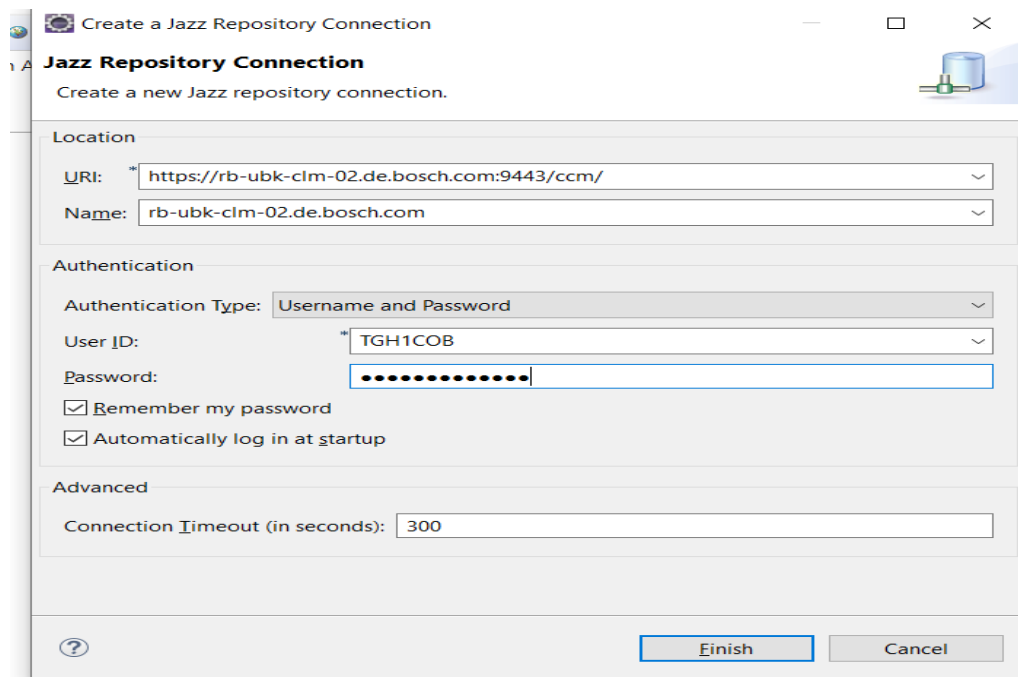

[Manage Connected Project Areas](#)

[Create a Project Area](#)

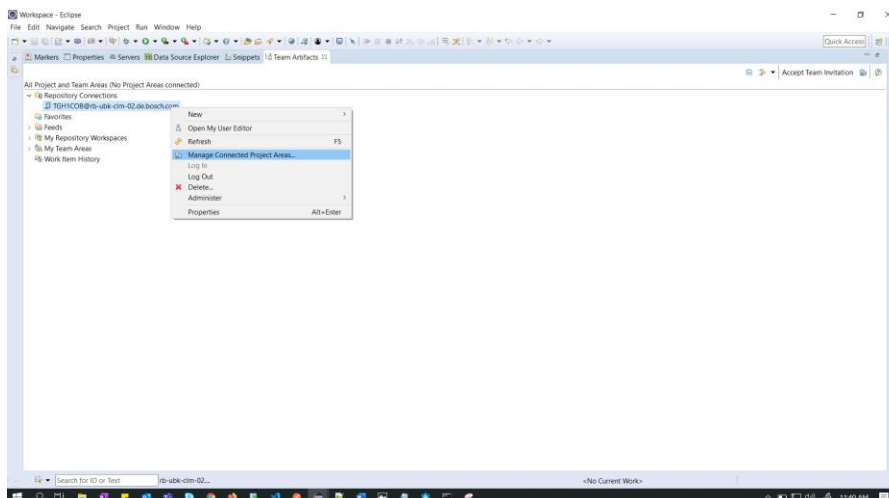

[Create a Repository Connection](#)

[Open First Steps welcome page for review](#)

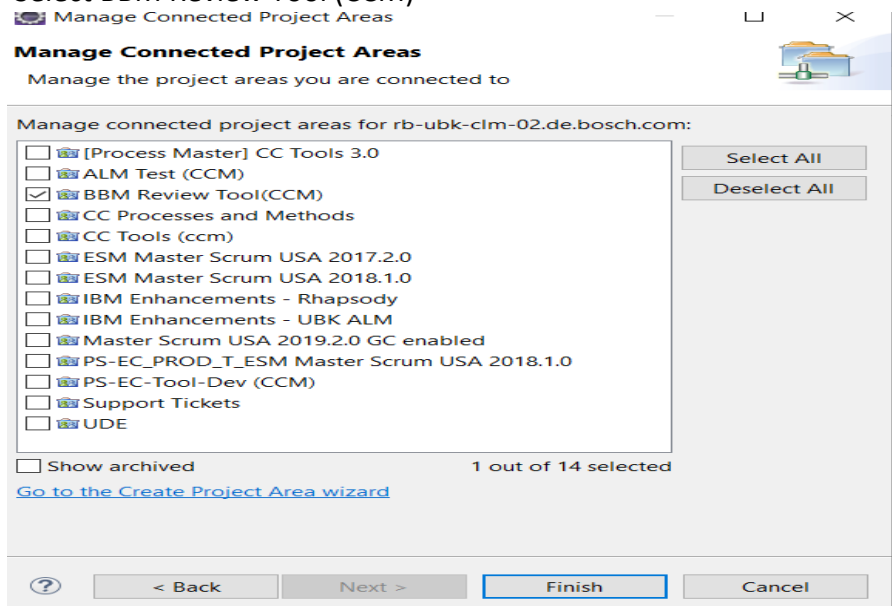

9. Select **Create a Repository Connection -> URI ->** paste <https://rb-ubk-clm-02.de.bosch.com:9443/ccm/> and enter your NTID and password. Click Finish

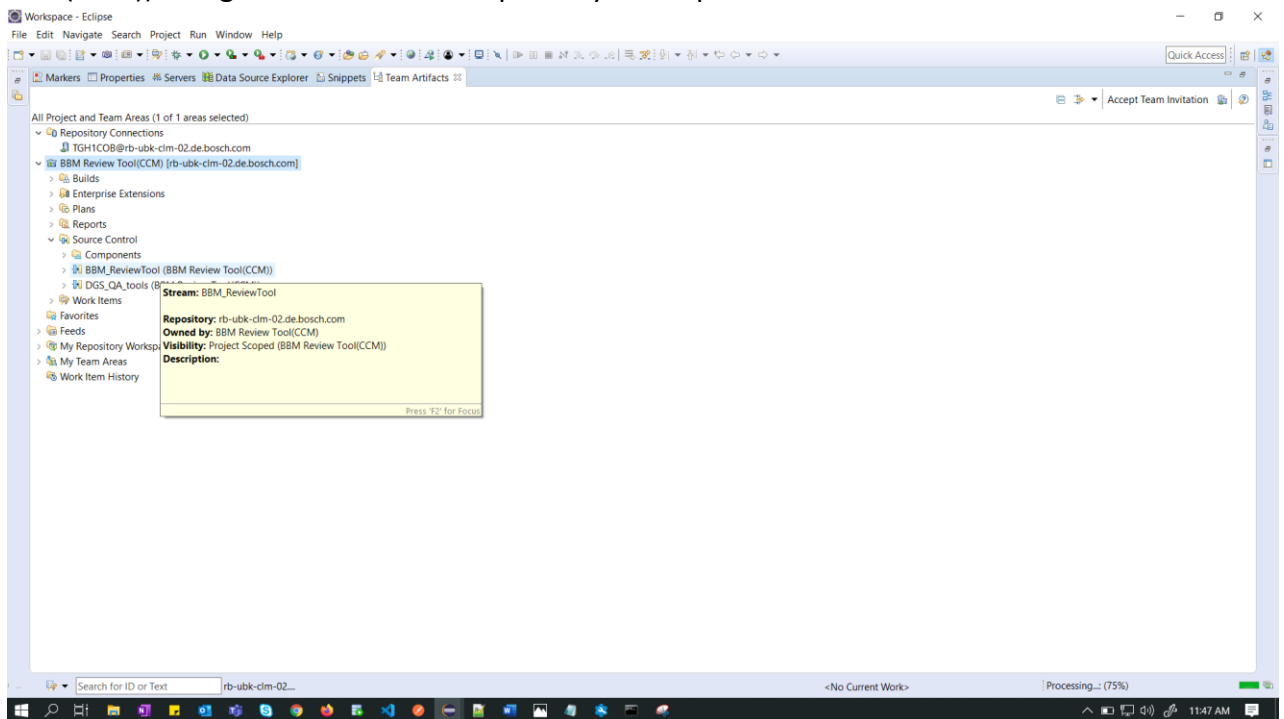

10. Right click on the connection -> select manage connected project area

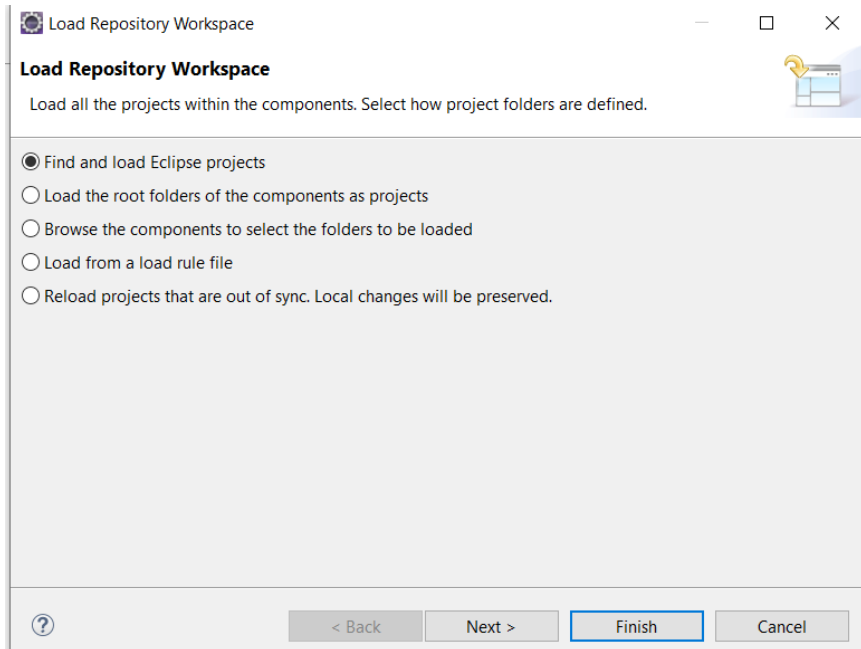

11. Select BBM Review Tool (CCM)

12. Expand BBM Review Tool (CCM) -> Source Control -> BBM_ReviewTool(BBM Review Tool(CCM)) -> Right click -> New -> Repository Workspace -> Finish

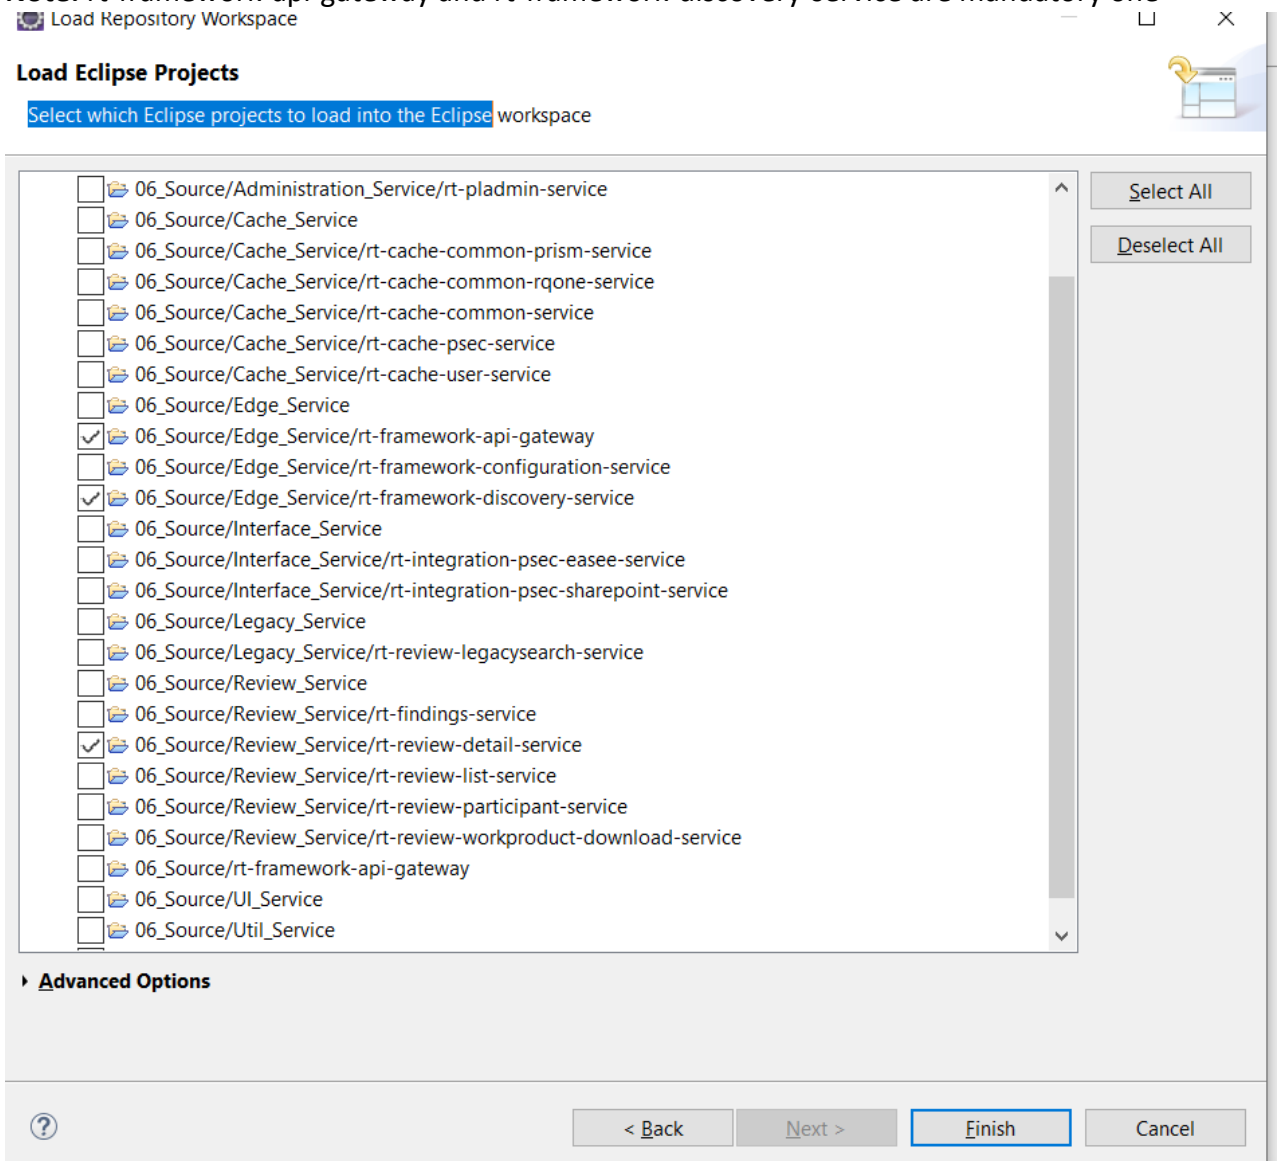

13. Select Find and Load Eclipse Project

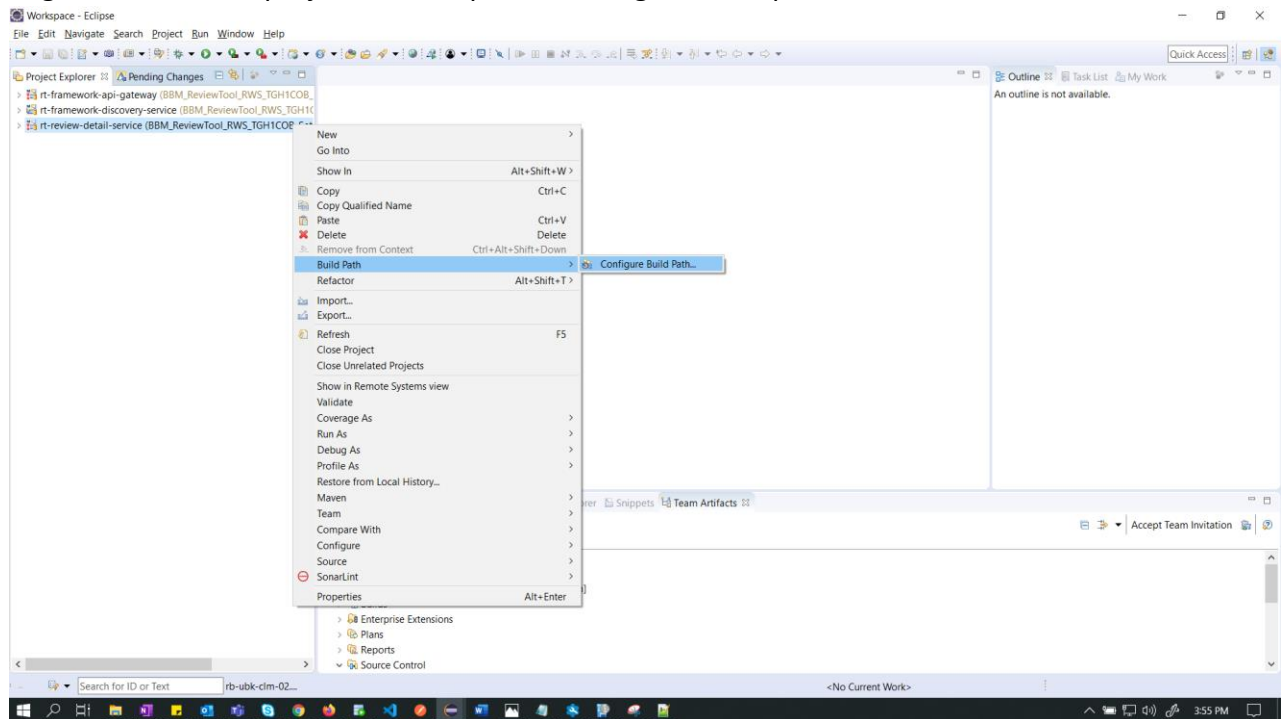

14. Select Required project from the list and select finish

Note: rt-framework-api-gateway and rt-framework-discovery-service are mandatory one

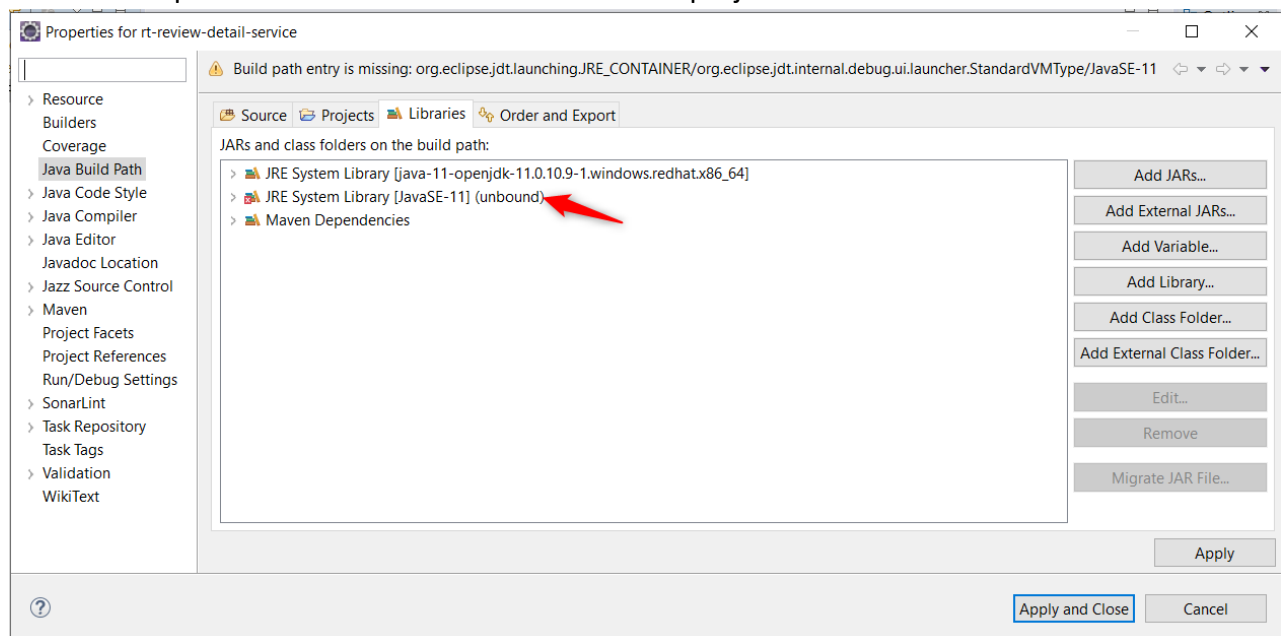

15. Then select **Project -> properties -> java build path -> select libraries tab -> select add library -> JRE System Library -> Installed JREs -> select Java 1.8 and select remove -> Add -> Standard VM -> Directory -> select the java-11-openjdk-11.0.10.9-1.windows.redhat.x86_64 folder in the extracted folder -> Select Finish -> select the check box near Java 11 -> Apply and close -> Finish -> Apply and close**
16. Right click on each project -> build path -> configure build path.

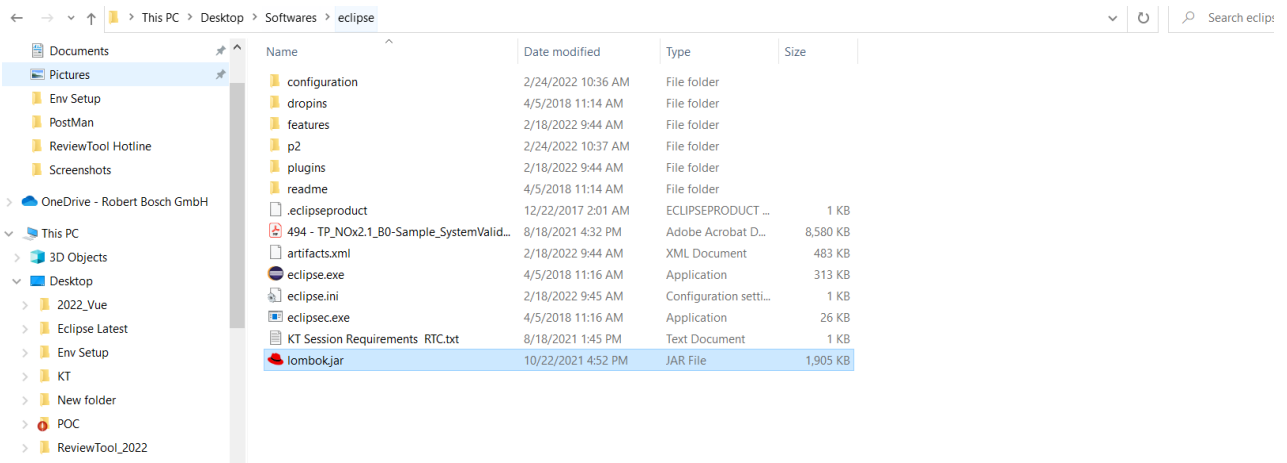

17. If you find unbound library select the library -> select remove -> apply and close.

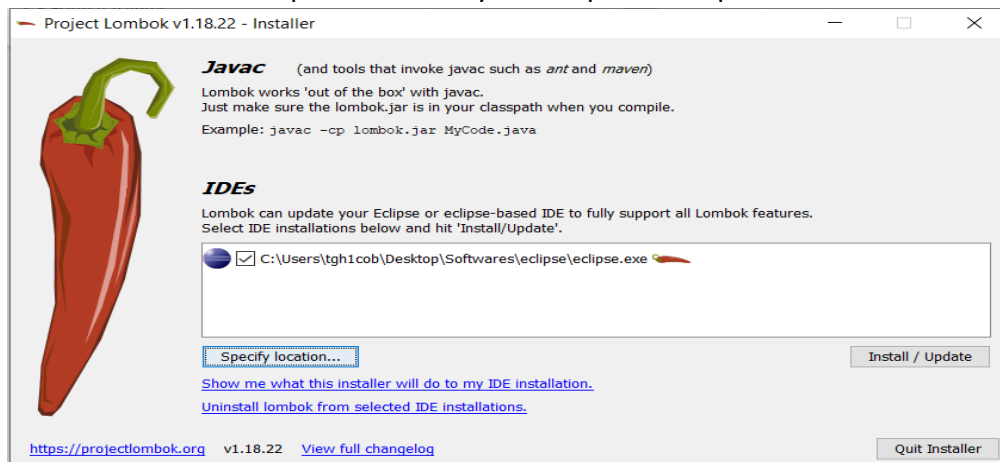

Note: Do step 16 and 17 this for all the checked-out projects.

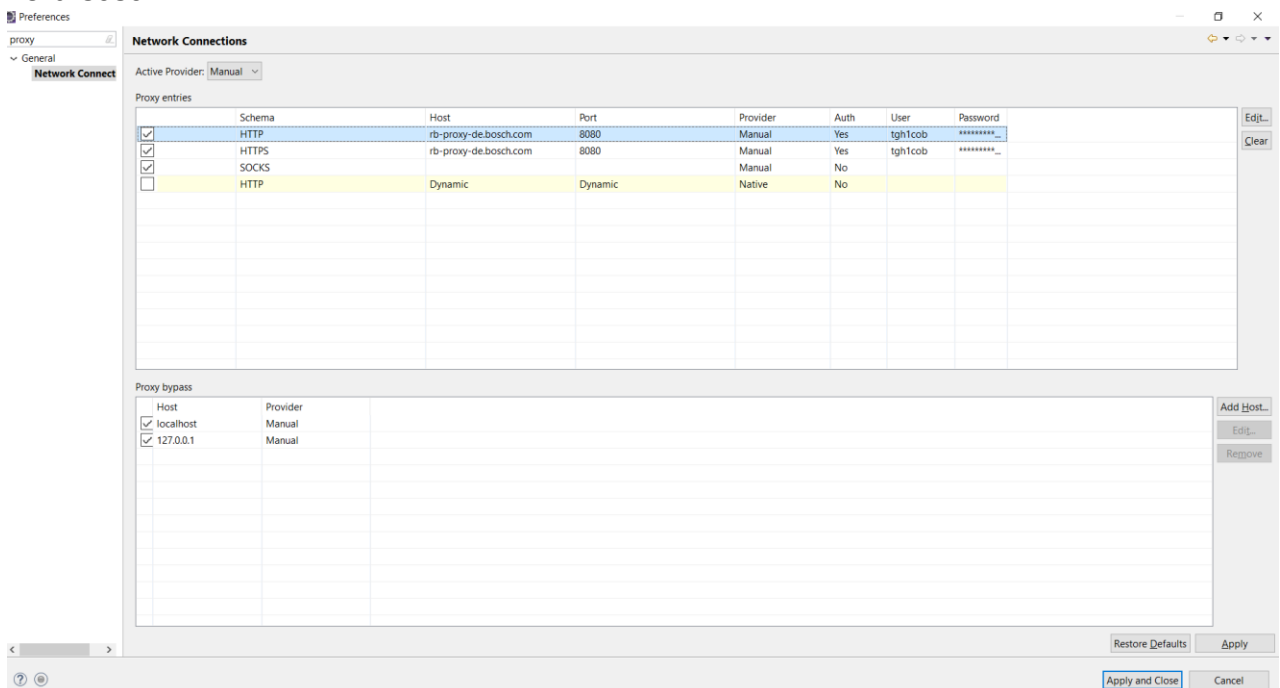

18. Copy lombok.jar from [\\korvm039\Revtool Files\softwares\2021 ReviewTool Dev Setup](#) into you eclipse folder.

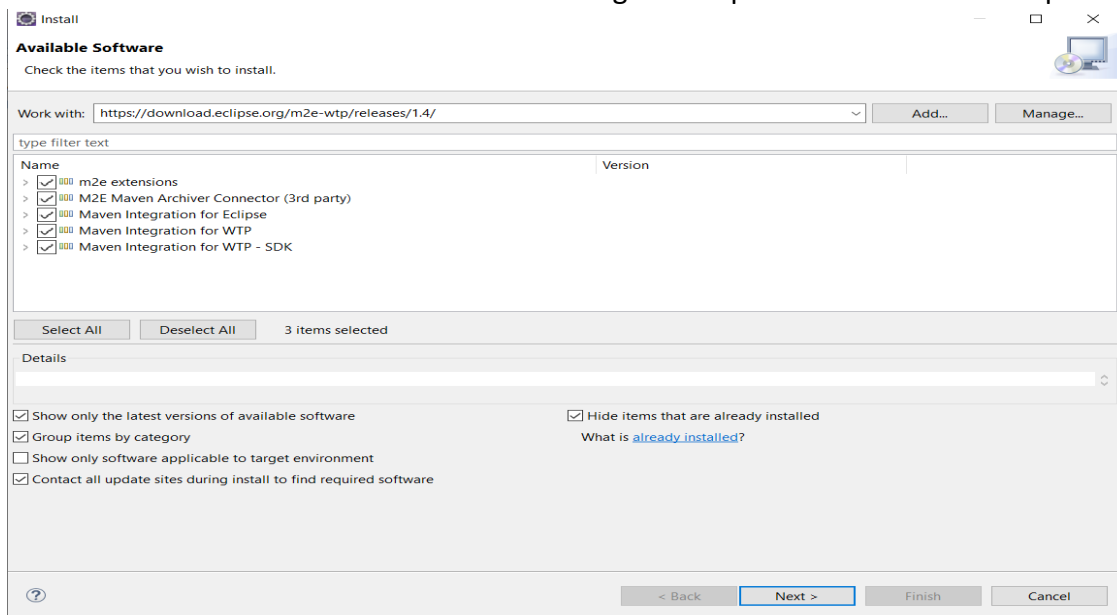

19. Double click on lombok.jar -> Click okay if you get Can't find IDE pop up -> select specific location -> navigate to the eclipse folder and select eclipse.exe and select Install/Update. Once Installation completed restart your eclipse workspace.

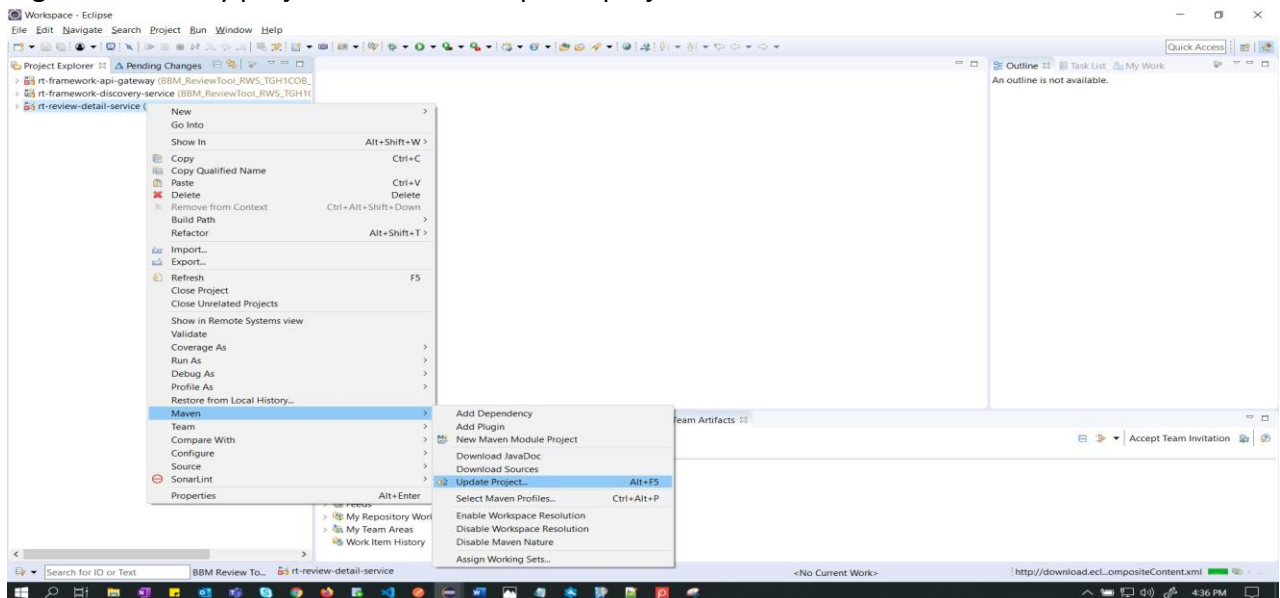

20. In Eclipse select **Windows -> Preference -> search for Network Connection -> Set Active Provider to Manual -> Set the values as below. Use your username password**
Host: rb-proxy-de.bosch.com
Port: 8080

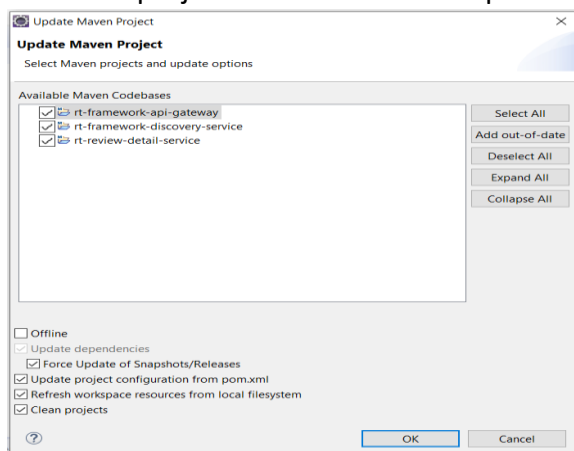

21. In eclipse if you have an unknown error in pom.xml file (only in first line) in your projects then select **Help -> Install New Software -> Add -> Location**
<https://download.eclipse.org/m2e-wtp/releases/1.4/> paste this and click okay. Select all the software and click finish. Once Installation gets completed restart the workspace.

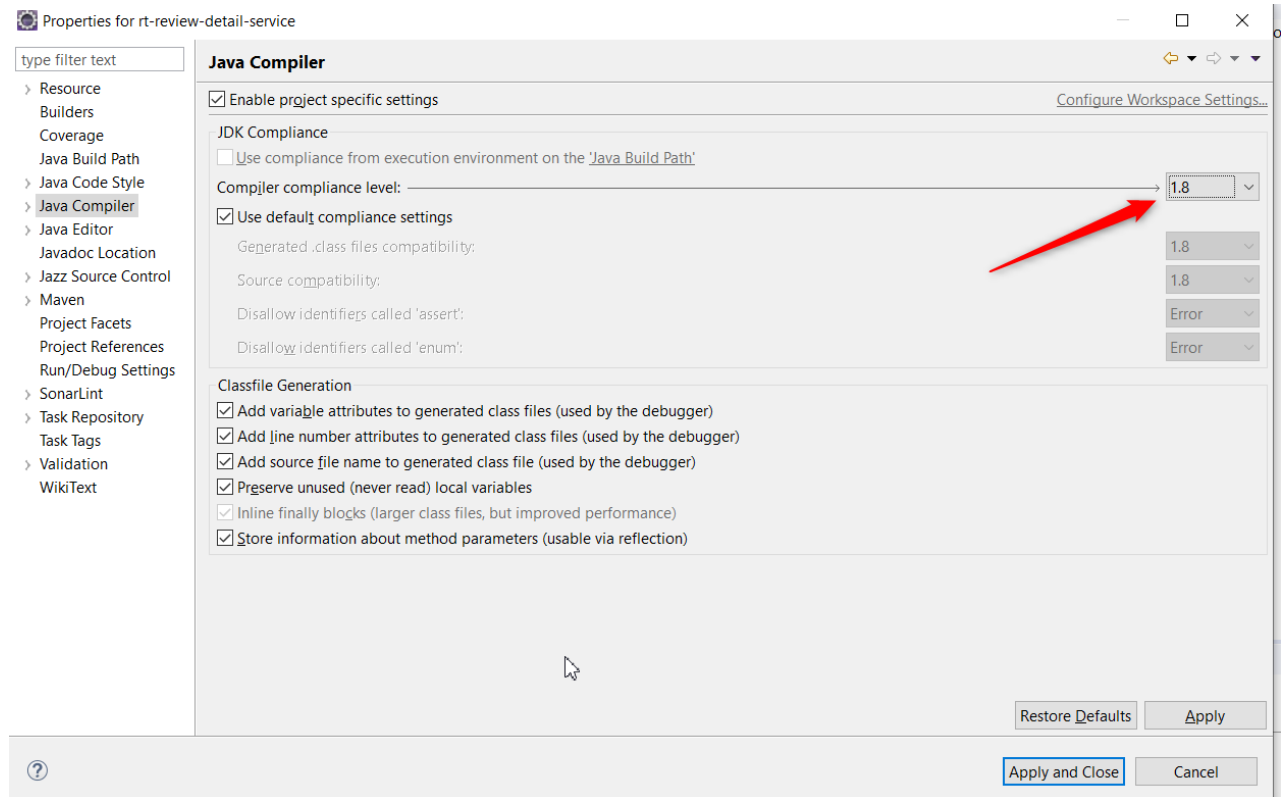

22. Right click on any project -> Maven -> update project

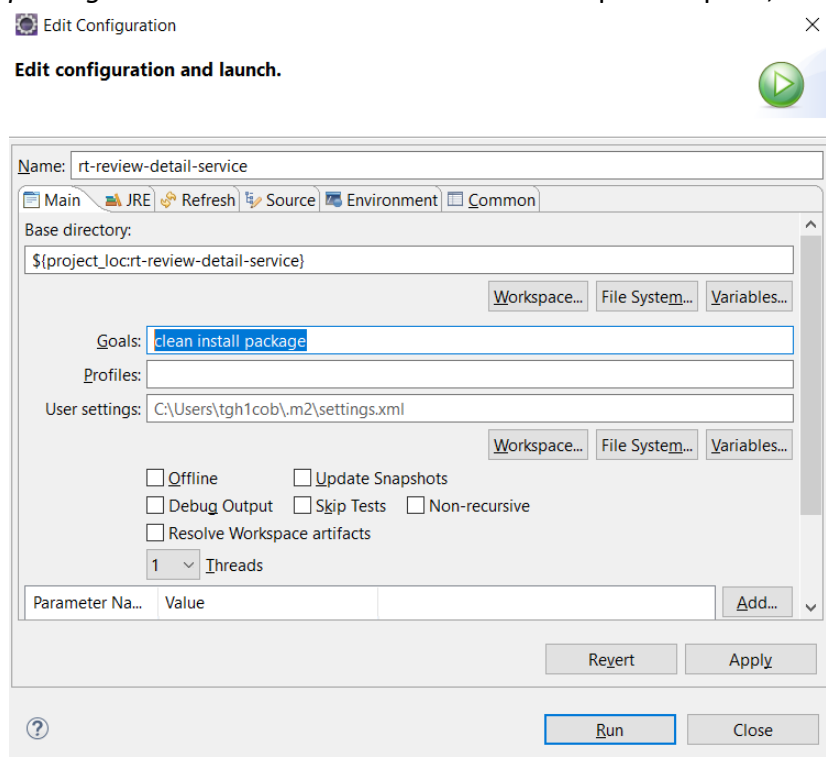

23. Select all projects and select Force update of snapshots/ releases and click okay

24. Right click on each project -> build path -> configure build path. Remove Unbound library and JRE System library [J2SE-1.5]. And select add library -> Workspace default -> finish -> apply.
25. On the same preference pop up select java compiler in the left pan and select 1.8. Repeat Step 24 and 25 for all projects

26. Right click on a Project -> Run As -> Maven Clean
27. Right click on a Project -> Run As -> Maven Install
28. Right click on Project -> Run As -> Maven Build Alt+Shift+X,M and in goals give *clean install package* and click run. Once build success. Repeat step 26 , 27 and 28 for all projects

29. Now Right click on the discovery service -> Run as -> Java Application -> Select DiscoveryServerApplication and click run.
30. Right click on the api gateway service -> Run as -> Java Application -> select ApiGatewayServiceApplication and click run.

Note: Before starting any other micro service discovery and api gateway should be started first. And Discovery service should be always started first and then api gateway
